El Capitan has been out for about a week, and we're adding in the new features. As announced at Apple's WWDC conference, Yosemite is the fall release of OS X 10.10 that was originally released last October. El Capitan adds the Touch Bar to the new MacBook Pro computers, a new interface element taking advantage of the TouchID fingerprint ID and the new Touch Bar. There is also a new Messages app and a new Numbers app, along with other changes. One of the most exciting new features in the iPad version of Photoshop is the iPad Pro 1,1 Ipad Pro, and Touch Cover combinations. Also, the iPad Pro 2,2 Ipad Pro, and Touch Cover 2 can be used to edit the photo. The interactions are identical to the iPad Pro with screen and Apple Pencil, but multiple iPads are needed to create a memory-space image file. You can produce a single image using a touch screen and a mouse, and share a memory-space image using an external drive. While we applaud the decision to provide a full-featured version of Photoshop for the iPad Pro, the app runs slowly for some people, particularly on phones with 720p displays and lower capacity devices like the iPad 2. In addition to reviewing the editing tools, of interest is the Display Settings panel where you can tweak the resolution to whatever fits your screen. With image adjustments, you can get a "native" 12 megapixel image, which is fine for displaying in a browser, but doesn't save anywhere. While you may be able to do the equivalent with somebody else's programs, judging by the Photoshop team's thorough and thoughtful message, you won't find better tools for photo editing, and they're as open as they've always been. There are appeal details in a support discussion forum. We also liked that people who reached out to Adobe for help were offered full refunds for Adobe Ink. It's a thoughtful and convenient app.
